Dear Edinburgh Assay team,

I am writing to apply for the job of Junior Python Developer. My name is Yasha Duncan-Wilson, and I'm a self-taught developer working primarily in Python with SQL, but with experience of React, vanilla JS, and HTML/CSS. While I have no formal experience, I have undertaken several projects for clients in the past with success.

Currently, I am indefinitely postponing my studies at Heriot-Watt university for medical reasons, and hope to instead build upon my experience by finding a long-term position where my willingness to learn new technologies and operate in a hands-off role fits and compliments the existing team. I have previously been described as 'self-motivated' and 'a results-focused individual' and am equally comfortable working as part of a team or independently.

My experience of building projects in Python and SQL, alongside my experience of owning technical projects from conception to deployment during my time as a freelancer, makes me an excellent candidate for this role. I use Git as standard on projects and am passionate about writing effective documentation for myself and others. I've also deployed applications on my personal server using Docker and Authelia for access control, which has taught me about Linux systems administration. At the Edinburgh Hacklab, I've worked on Python code which has been deployed for a decade or more, and am comfortable navigating "real-world" codebases.

Given all these points, I feel strongly that my background and skillset would make me an excellent addition to the team.

Thank you for your time and consideration,
Yasha Duncan-Wilson
