Dear Craneware team,

I am writing to apply for the job of Software Engineer. My name is Yasha Duncan-Wilson, and I'm a self-taught developer working primarily in Python but with significant previous experience of SQLite, React, vanilla JS, and HTML/CSS. While I have no formal professional experience, I have undertaken small projects for clients in the past with success.

Currently, I am postponing my studies at Heriot-Watt university for medical reasons, and hope to instead build upon my experience by finding a position where my willingness to learn new technologies and operate in a hands-off role fits and compliments the existing team. I have previously been described as 'self-motivated' and 'a results-focused individual' and am equally comfortable working as part of a team or independently.

I consider myself a detail-oriented and independent worker who's excellent at communicating with technical and non-technical stakeholders. I'm also familiar with much of the technology the role requires - for instance, I've recently used Python, FastAPI SQLite, JS, and Docker to build and deploy a home library management system, tracking and suggesting book locations. I enjoy operating in a test-driven development style and am equally comfortable working alone or as part of a team.

I hope this shows that I'm a good fit for the role - passionate, at home in fast-paced environments, and comfortable working alone or in collaboration with others. I enjoy taking ownership of a feature from conception to deployment, and have excellent problem-solving skills.

Thank you for your time and consideration,
Yasha Duncan-Wilson
