Dear Invergex team,

I am writing to apply for the job of Software Developer. My name is Yasha Duncan-Wilson, and I'm a self-taught developer working primarily in Python but with significant previous experience of SQLite, React, vanilla JS, and HTML/CSS. While I have no formal experience, I have undertaken several projects for clients in the past with success.

Currently, I am postponing my studies at Heriot-Watt university for medical reasons, and hope to instead build upon my experience by finding a position where my willingness to learn new technologies and operate in a hands-off role fits and compliments the existing team. I have previously been described as 'self-motivated' and 'a results-focused individual' and am equally comfortable working as part of a team or independently.

I feel that I work at my best when I can bring creativity, outside-the-box thinking, and my ability to quickly learn new skills to bear. I enjoy roles which require me to be agile and to iterate quickly while maintaining code standards. I've recently demonstrated this with a hobby project, designing and building a datalogger for model rocketry, a process which has taught me about hardware design as well as embedded C++.

I hope this shows that I'm a good fit for the role - passionate, at home in fast-paced environments, and comfortable working alone or in collaboration with others. I enjoy taking ownership of a feature from conception to deployment, and have excellent problem-solving skills.

Thank you for your time and consideration,

Yasha Duncan-Wilson
