Dear smartKYC team,

I am writing to apply for the job of Software Developer. My name is Yasha Duncan-Wilson, and I'm a self-taught developer working primarily in Python but with significant previous experience of SQLite, React, vanilla JS, and HTML/CSS. While I have no formal experience, I have undertaken several projects for clients in the past with success.

Currently, I am postponing my studies at Heriot-Watt university for medical reasons, and hope to instead build upon my experience by finding a position where my willingness to learn new technologies and operate in a hands-off role fits and compliments the existing team. I have previously been described as 'self-motivated' and 'a results-focused individual' and am equally comfortable working as part of a team or independently.

A commitment to testing is something I take very seriously. I have an excellent attention to detail and an analytical mind, enabling me to deduce possible edge cases and unintended behaviour. I'm also an excellent communicator, comfortable articulating ideas to technical and non-technical stakeholders alike. Collaboration is something which comes naturally to me, both within my team and outside it, and I enjoy discussing technical aspects of design and learning from others.

I hope this shows that I'm a good fit for the role - experienced as part of a team, a great communicator, and very detail-oriented. I enjoy ensuring that the experience an end-user has is as good as it can be, and I understand the need to carefully validate fixes and avoid regressions.

Thank you for your time and consideration,
Yasha Duncan-Wilson
