Dear UserTesting team,

I am writing to apply for the job of Full Stack Engineer. My name is Yasha Duncan-Wilson, and I'm a self-taught developer working primarily in Python with FastAPI and SQLite but with significant previous experience of React, vanilla JS, and HTML/CSS. While I have no formal experience, I have undertaken several projects for clients in the past with success.

Currently, I am indefinitely postponing my studies at Heriot-Watt university for medical reasons, and hope to instead build upon my experience by finding a long-term position where my willingness to learn new technologies and operate in a hands-off role fits and compliments the existing team. I have previously been described as 'self-motivated' and 'a results-focused individual' and am equally comfortable working as part of a team or independently.

My experience of Python, FastAPI and React makes me perfect for this role; I am also experienced with SQL and always enjoy learning new technologies, frameworks and standards. Technical documentation is an area I'm passionate about and committed to improving on in all the projects I'm involved with. While I recognise that I don't have formal experience in all the areas you're looking for, I'm confident that my other qualities - attention to detail, firm belief in following best practices, and ability to effectively communicate with technical and non-technical stakeholders alike - will translate well to a career at UserTesting.

Thank you for your time and consideration,
Yasha Duncan-Wilson
