Dear Wood Mackenzie team,

I am writing to apply for the job of Software Engineer II. My name is Yasha Duncan-Wilson, and I'm a self-taught developer working primarily in Python and SQLite but with significant previous experience of React, vanilla JS, and HTML/CSS. While I have no formal experience, I have undertaken several projects for clients in the past with success.

Currently, I am indefinitely postponing my studies at Heriot-Watt university for medical reasons, and hope to instead build upon my experience by finding a long-term position where my willingness to learn new technologies and operate in a hands-off role fits and compliments the existing team. I have previously been described as 'self-motivated' and 'a results-focused individual' and am equally comfortable working as part of a team or independently.

My experience of Python makes me perfect for this role; I am experienced with SQL and always enjoy learning new technologies, frameworks and standards. I have lots of experience in automating tasks and creating tooling to help do so. While I recognise that I don't have formal experience in all the areas you're looking for, I'm confident that my other qualities - attention to detail, firm belief in following best practices, and ability to effectively communicate with technical and non-technical stakeholders alike - will translate well to a career at Wood Mackenzie.

Thank you for your time and consideration,
Yasha Duncan-Wilson
